This indicator is based on simulated historical data which may not be a reliable indication of the future risk profile of such Class. The categorisation of the Class in the scale is not guaranteed to remain unchanged and may shift over time. The lowest category does not mean a risk-free investment.

Why this category? The Sub-Fund is in this specific category because it has shown a high level of volatility.

The main risks the Sub-Fund will face are equity market volatility. An extensive outline of all the risk factors may be found under section 5 "RISK FACTORS" in the Prospectus.

In particular the following risks should be considered:

- The risk of devaluation of the assets of the Sub-Fund, which depends among other factors on the perspectives of economical growth and future profits from companies which have their activities in Portugal and Spain. The Sub-fund will not hedge these risks systematically.
- The risks associated to the use of derivative instruments.
